

**General Notes:**

1. Remove all silt fence after project is completed.
2. Paint entrance letters with exterior black paint and clear protective coating before reinstalling.

**Schavey Road Entrance  
Proposed Plan**

Not to Scale

North

Construct 30 feet of 4' high black aluminum fence, as shown above. Attach each fence post to the existing concrete foundation.

Construct curved concrete split-faced block reinforced wall between pillars to match existing. Secure new limestone cap on wall and seal watertight. Typical of 2.

Construct four (4) 3' x 3' x 6' high masonry pillars with concrete block cores covered with stone, as shown in image above. Limestone Pillar cap must be one piece, secured to structure, and be watertight. Pillars to be located on existing foundations.

Reattached electrical panel, box and sprinkler system controller to new west wall. Reattached electrical box on backside of east wall.

New landscaping to include weed barrier, stone, and 5 plants on each side of Schavey Road.
